LOOKING FOR

Full-stack roles where systems and people overlap

Best fit: small teams, research tools, internal systems, and work that needs code, diagnostics, growth, and AI agents.

STRENGTHS

- / Turning vague requirements into working software
- / Diagnosing failures across technical and human systems
- / Systems thinking under messy constraints
- / Zero-to-one growth and community building
- / Crisis communication without losing the plot
- / Using AI agents to multiply execution

OPERATING RANGE

FULL STACK	PYTHON	RUST	LINUX	SELF-HOSTING	DIAGNOSTICS	SYSTEMS THINKING	GROWTH
CRISIS COMMS	AI AGENTS						

SELECTED WORK

Randonautica / Randonauts

Created Randonauts and co-founded Randonauts LLC. Helped turn a random-coordinate Telegram experiment into a viral app and early revenue engine: zero to \$100k/month, millions of users, TikTok-driven growth. Wikipedia lists me as founder.

QTrainer / QTurk

Built research-tool workflows across Python/Rust, APIs, auth/session logic, Linux self-hosting, diagnostics, and operational fixes.

Ops & Automation

Used code and agents to inspect, isolate, and fix problems across apps, servers, deploys, DNS, content, and support workflows.

WORK FIT

I help teams diagnose the real problem, ship the fix, explain it clearly, and keep momentum when the work crosses layers.
